## *Welcome Address...*

It gives me great pleasure and honor to invite you to the 40<sup>th</sup> Ain Shams Annual Congress amidst a real crossroads of a process and cascade of changes and total reform in Our country. Our annual congress has passed through successive stages but this year it is our intention to make it the platform showcasing multidisciplinary medical practices uniting all related specialties, subspecialties and topics; involving basic academic, clinical and translational sciences together. Uniting our distinguished faculty and students with experts and opinion leaders under the same roof to shape our current and future medical education, training programs, medical practices and research is the foundation upon which we always rely. Likewise, special care and gratitude is due to our alumni whom we urge to attend, share, advice and enlighten everybody with their great experience. Ain Shams medical week has been structured this year to make it remain as a landmark within the annual multidisciplinary medical events round the globe. We will be honored and privileged by hosting scientists, experts, trainees and students from all the departments during this important and inspiring time in our recent history. During the month of March, the weather is very pleasant so everybody can enjoy the historical, entertaining and rich social program that is planned for you ahead. Please enjoy your stay, develop new partnerships and expand your horizon and I will be looking forward to meeting you all there.

*Prof. Mahmoud El-Meteini*  
Dean of Faculty of Medicine

## Post Conference Workshop

### “Surveillance is a Tool not a Target”

A 2-Day Workshop (Discussion of clinical case scenarios and Hands-on Training)

#### Aim:

To enable microbiologists and infection preventionists to identify some challenging health care associated infections including central line associated blood stream infection (CLABSI), catheter associated urinary tract infection (CAUTI), and ventilator associated pneumonia (VAP). Moreover, to allow them to utilize the most updated related surveillance terms and concepts.

#### First Day (Thursday, 21 March 2019)

Presentation and group discussion of clinical case scenarios of CLABSI, CAUTI and VAP to clarify:

- Clinical characteristics
- Updated surveillance definitions
- Planning of microbiological workup to reach a definitive diagnosis

**Director: Prof. Maha Fathy**

**Moderator: Prof. Lamia Fouad**

#### Clinical Coordinator:

**Dr. Ahmed Kamal Mohamed**

Lecturer of Anesthesia and Intensive care

#### Coordinators: (Staff of Medical Microbiology and Infection Control, in alphabetical order):

Ass.Prof. Dina Erfan  
Ass. Prof. Nadia El-Sheshtawy

# “Wow”

The clinical response most commonly heard when surgeons first experience the new **HARMONIC® HD 1000i**.

#### Unmatched precision

with a unique jaw shape that reduces the need to use a separate dedicated dissecting instrument.<sup>1</sup>

#### Unparalleled strength

with a blade design that delivers more secure seals, even in the most challenging conditions.<sup>2,3\*</sup>

#### Optimal efficiency

from increased sealing speed, multi-functionality, and simplified steps for use.<sup>4,5</sup>

#### References

The study showed that the Harmonic HD 1000i was able to perform the same tasks as the standard dissector, but with a significantly reduced need for a separate dissecting instrument. 2. # Take Greater Control

of Key Risk Factors Related to Surgical Site Infections (SSIs)

Suture selection provides an important opportunity to address a known risk factor for infection:

## Bacterial Colonization of the Suture

## Triclosan Coated Sutures are now supported by:

### Centers for Disease Control and Prevention (CDC)

Guideline for the Prevention  
of Surgical Site Infections 2017\*

"Consider the use of triclosan-coated sutures for the prevention of SSI."<sup>3</sup>

### World Health Organization (WHO)

Global Guidelines for  
The Prevention of Surgical Site  
Infection\*

The panel suggests the use of triclosan coated sutures for the purpose of reducing the risk of SSI, independent of the type of surgery.<sup>1</sup>

### American College of Surgeons Surgical Infection Society (ACS & SIS)

Surgical Site Infection Guidelines,  
2016 Update

The use of triclosan coated suture is recommended for wound closure in clean and clean-contaminated abdominal cases when available.<sup>2</sup>

\*The CDC, WHO, ACS & SIS guidelines on reducing the risk of surgical site infections are general to triclosan-coated sutures and are not specific to any one brand.

## From Surgical Site Infection Guidelines, 2016 Update:<sup>2</sup>

There is significant evidence in the literature to support the use of antimicrobial sutures to reduce the risk of SSI. Numerous studies have demonstrated decreased risk of SSI with use of triclosan antimicrobial sutures compared to standard suture, including multiple randomized, controlled trials. Systematic review and meta-analysis on the subject has confirmed this effect.

# Ethicon Plus Antibacterial Sutures are the only sutures with triclosan available worldwide.<sup>5,\*</sup>

**Plus Sutures** have been shown in vitro to inhibit colonization of the suture for **7** days or more, including bacteria commonly associated with surgical site infection (SSI).<sup>1,4</sup>

## Triclosan: the antibacterial agent used in Ethicon Plus Sutures

Ethicon Plus Sutures are made with Medical grade Triclosan.

### SUTURES Plus

Antibacterial Suture with IRGACARE® MP\* (Triclosan)

IRGACARE® MP\* is a broad-spectrum antimicrobial agent that has been widely used and extensively studied for over 40 years!

The small amount of triclosan used in Plus Sutures does not accumulate in the body and is metabolized and excreted in a neutralized form!

Prospectively planned meta-analyses of RCTs were performed on the use of suture containing triclosan to lower SSI rates

## EXCELLENT PACKAGING

Surgipro™ II suture packaging provides:

1. Minimal Memory
2. Clear Labeling
3. Ease of Use
  - Easy dispensing
  - Easy to load

Actual product appearance may vary.

## FREQUENT USES

### Cardiovascular Vascular Procedures

- CABG
- Proximal and Distal Anastomosis
- Cannulation

### Peripheral Vascular Procedures

- Abdominal Aortic Aneurism
- Femoropopliteal Bypass
- Carotid Endarterectomy
- AV Fistula or AV Graft

## INDICATIONS

Indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic, and neurological surgery.

## CONTRAINDICATIONS

None known.

## The first curved tip reload for improved maneuverability and blunt dissection

In difficult-to-reach anatomy, the flexible introducer may help guide the fixed anvil under the vessel/tissue that is to be transected.

Curved tip reloads come with all the features and benefits of Tri-Staple™ technology as well as:

### Improved maneuverability and visualization

- Gold curved tip at the distal end of the reload provides enhanced visualization of the anvil tip to ensure that target tissues are captured.
- Radiopaque, flexible introducer can be mounted onto the curved tip.
- Curved tip and flexible introducer are designed to guide the fixed anvil around target tissues/vessels.

### Tissue manipulation and blunt dissection

- Atraumatic curved tip can be used for blunt dissection.
- Curved tip can be used to manipulate tissues while positioning the reload before firing.

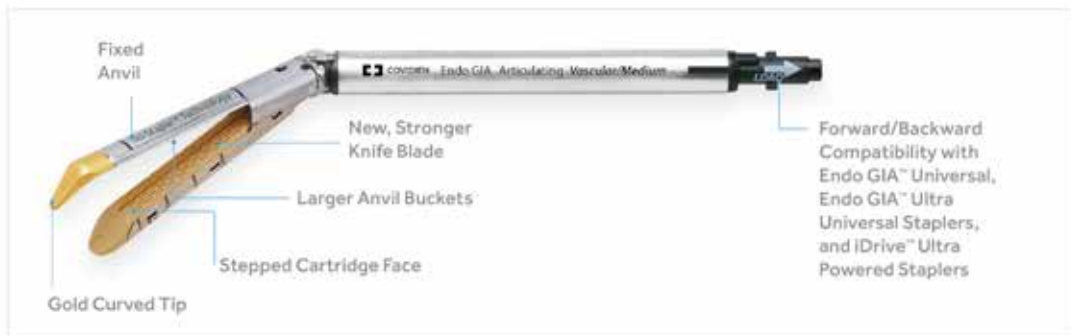

## Simplification of cartridge selection

† Extra-thin/Vascular reload contains three rows of 2.0 mm staples (non-varied height) and contains all the other features and benefits of an Endo GIA® reload with Tri-Staple™ technology.

## Endo GIA™ Curved Tip Reload with Tri-Staple™ Technology

### Varied-Height Staples and Stepped Cartridge Face

The fixed anvil, variable-sized staples and stepped cartridge face design of Tri-Staple™ technology allow the curved tip reloads to be used over a wider range of tissue thicknesses and reduce the force required to compress tissue to desired thickness.

A haemostatic patch proven to stop bleeding in just 1 minute<sup>1</sup>

Veriset™ Haemostatic Patch

The Confidence To know Bleeding Will Stop

Potentially lowering costs associated with surgery and postoperative patient management

#### SAFETY FOR YOUR PATIENTS

- Intraoperative reliability and consistency<sup>1</sup>
- Contains no animal or human components, eliminating risk of viral transmission<sup>2</sup>

#### IMPRESSIVE CLINICAL PERFORMANCE

- Hold in place for only 30 seconds<sup>2</sup>
- Single application sufficient to stop most bleeds<sup>1</sup>
- Even in cases of inhibited coagulation<sup>1</sup>
